

DMV COMPANY PROFILE

DMV has been producing professional LED displays since 1990. Ever since, our common goal is to fully meet customer demanding applications in different fields of sport, traffic, industry and public information. Displays are often accompanied with advanced controlling hardware or software with demanding functions and communication protocols. We also take special care on optic performances as well as display life-time and reliability. That added value gives us the advantage on the market and distinguishes us from general-purpose display producers.

The range of our products includes three basic groups:

- LED traffic signs
- Sport scoreboards
- Information/advertising/ industrial LED displays

We sell service and maintain our products through our partner companies, all over the world. We have installed products in more than 70 countries.

Our team is made of qualified and responsible people (70 permanently employed) and a network of reliable contractors.

In 4000 m² production plant and 3000 m² open space, we incorporate all technological parts for LED signs production. There are fully equipped mechanic, electronic, testing and assembling divisions and optical laboratory as well as hardware and software development units.

We have introduced ISO 9001 quality standard and EN12966 product standard for LED traffic signs.

DMV, Kraljevića Marka bb, 18000 Niš, Serbia, tel/fax: +381 18 4591 556, 4591 552

DMV displays in the world - 2016

Maintaining quality and alignment with our productions standards is always ongoing process in our company and it has been incorporated in our mission and vision from our early starts.

As the needs of the market are changing frequently, demands grow and LEDs improve, we promise constant development.

Overall, essence of our business is always seeking for new know how technologies, employee engagement and, first of all, customer orientation.
